RESEARCH INTERESTS

My long-term research vision centers on developing trustworthy and scalable decision-making systems. To this end, I aim to: (1) develop data-efficient reinforcement learning algorithms that can learn effectively even in data-scarce or costly-to-simulate environments, addressing the fundamental challenge of limited data availability in real-world applications; and (2) ensure that autonomous agents make reliable, safe, and human-aligned decisions that can be trusted and seamlessly integrated into complex real-world systems such as robotics and interactive environments.
